ID-800

Addendum:

■ BREAK-IN COMMUNICATIONS p.67

The break in communications feature allows a user to break into a conversation, where the two original stations are communicating with call sign squelch enabled. The breaking station should enter the call sign of one of the stations that they wish to communicate with. When you call the desired station, only the selected station will hear the call. With the Break function enabled, both stations will be able to hear the call.

■ CLEARING A MEMORY CHANNEL p.36

The manual states that the key sequence must be completed within 1.5 seconds. The key sequence must be carried out in 0.5 seconds.
